	1/1 point
What does tcpdump do?	
O Brute forces password databases	
Generates DDoS attack traffic	
Performs packet capture and analysis	
O Handles packet injection	
 Correct tcpdump captures and analyzes packets for you, interpreting the binary information contained in the packets and converting it into a human-readable format. 	
2.	1/1 point
What can protect your network from DoS attacks?	
O IP Source Guard	
O DHCP Snooping	
Flood Guard	
O Dynamic ARP Inspection	
 Correct Flood guards provide protection from DoS attacks by blocking common flood attack traffic when it's detected. 	
3.	1/1 point
What occurs after a Network Intrusion Detection System (NIDS) first detects an attack?	
O Blocks traffic	
O Disables network access	
O Shuts down	
Triggers alerts	
⊙ Correct A NIDS only alerts when it detects a potential attack.	
4.	1/1 point
What does a Network Intrusion Prevention System (NIPS) do when it detects an attack?	
It attacks back.	
It attacks back. It does nothing.	
O It does nothing.	
It does nothing. It blocks the traffic.	
 It does nothing. It blocks the traffic. It triggers an alert. ✓ Correct 	
 It does nothing. It blocks the traffic. It triggers an alert. ✓ Correct 	1/1 point
 It does nothing. It blocks the traffic. It triggers an alert. ✓ Correct 	1/1 point
It does nothing. It blocks the traffic. It triggers an alert. Correct An NIPS would make adjustments to firewall rules on the fly, and drop any malicious traffic detected. How do you protect against rogue DHCP server attacks?	1/1 point
It does nothing. It blocks the traffic. It triggers an alert. Correct An NIPS would make adjustments to firewall rules on the fly, and drop any malicious traffic detected. The work of the server attacks? DHCP Snooping	1/1 point
It does nothing. It blocks the traffic. It triggers an alert. Correct An NIPS would make adjustments to firewall rules on the fly, and drop any malicious traffic detected. How do you protect against rogue DHCP server attacks?	1/1 point
It does nothing. It blocks the traffic. It triggers an alert. Correct An NIPS would make adjustments to firewall rules on the fly, and drop any malicious traffic detected. The word of you protect against rogue DHCP server attacks? DHCP Snooping Dynamic ARP Inspection	1/1 point
It does nothing. It blocks the traffic. It triggers an alert. Correct An NIPS would make adjustments to firewall rules on the fly, and drop any malicious traffic detected. How do you protect against rogue DHCP server attacks? DHCP Snooping Dynamic ARP Inspection IP Source Guard	1/1 point
It does nothing. It blocks the traffic. It triggers an alert. Correct An NIPS would make adjustments to firewall rules on the fly, and drop any malicious traffic detected. The word of you protect against rogue DHCP server attacks? DHCP Snooping Dynamic ARP Inspection IP Source Guard Flood Guard Correct DHCP snooping prevents rogue DHCP server attacks. It does this by creating a mapping of IP addresses to	1/1 point
 It does nothing. It blocks the traffic. It triggers an alert. ○ Correct An NIPS would make adjustments to firewall rules on the fly, and drop any malicious traffic detected. 5. How do you protect against rogue DHCP server attacks? ● DHCP Snooping ○ Dynamic ARP Inspection ○ IP Source Guard ○ Flood Guard ○ Correct ○ DHCP snooping prevents rogue DHCP server attacks. It does this by creating a mapping of IP addresses to switch ports and keeping track of authoritative DHCP servers. 	
 It does nothing. It blocks the traffic. It triggers an alert. ② Correct An NIPS would make adjustments to firewall rules on the fly, and drop any malicious traffic detected. 5. How do you protect against rogue DHCP server attacks? ② DHCP Snooping Dynamic ARP Inspection IP Source Guard Flood Guard ② Correct DHCP snooping prevents rogue DHCP server attacks. It does this by creating a mapping of IP addresses to switch ports and keeping track of authoritative DHCP servers. 	1/1 point
 It does nothing. It blocks the traffic. It triggers an alert. ✓ Correct An NIPS would make adjustments to firewall rules on the fly, and drop any malicious traffic detected. How do you protect against rogue DHCP server attacks? DHCP Snooping Dynamic ARP Inspection IP Source Guard Flood Guard ✓ Correct DHCP snooping prevents rogue DHCP server attacks. It does this by creating a mapping of IP addresses to switch ports and keeping track of authoritative DHCP servers. What underlying symmetric encryption cipher does WEP use? 	
 It does nothing. It blocks the traffic. It triggers an alert. ✓ Correct An NIPS would make adjustments to firewall rules on the fly, and drop any malicious traffic detected. How do you protect against rogue DHCP server attacks? DHCP Snooping Dynamic ARP Inspection IP Source Guard Flood Guard ✓ Correct DHCP snooping prevents rogue DHCP server attacks. It does this by creating a mapping of IP addresses to switch ports and keeping track of authoritative DHCP servers. Mhat underlying symmetric encryption cipher does WEP use? AES 	
 It does nothing. It blocks the traffic. It triggers an alert. ✓ Correct An NIPS would make adjustments to firewall rules on the fly, and drop any malicious traffic detected. How do you protect against rogue DHCP server attacks? DHCP Snooping Dynamic ARP Inspection IP Source Guard Flood Guard ✓ Correct DHCP snooping prevents rogue DHCP server attacks. It does this by creating a mapping of IP addresses to switch ports and keeping track of authoritative DHCP servers. Mhat underlying symmetric encryption cipher does WEP use? AES DES 	
 It does nothing. It blocks the traffic. It triggers an alert. ✓ Correct An NIPS would make adjustments to firewall rules on the fly, and drop any malicious traffic detected. How do you protect against rogue DHCP server attacks? DHCP Snooping Dynamic ARP Inspection IP Source Guard Flood Guard ✓ Correct DHCP snooping prevents rogue DHCP server attacks. It does this by creating a mapping of IP addresses to switch ports and keeping track of authoritative DHCP servers. Mhat underlying symmetric encryption cipher does WEP use? AES DES RSA 	
 It does nothing. It blocks the traffic. It triggers an alert. ✓ Correct An NIPS would make adjustments to firewall rules on the fly, and drop any malicious traffic detected. How do you protect against rogue DHCP server attacks? DHCP Snooping Dynamic ARP Inspection IP Source Guard Flood Guard ✓ Correct DHCP snooping prevents rogue DHCP server attacks. It does this by creating a mapping of IP addresses to switch ports and keeping track of authoritative DHCP servers. Mhat underlying symmetric encryption cipher does WEP use? AES DES 	

VV	nat traffic would an implicit deny firewall rule block?	
(Everything that is not explicitly permitted or allowed	
C) Inbound traffic only	
\subset	Nothing unless blocked	
C	Outbound traffic only	
	Orrect Implicit deny means that everything is blocked, unless it's explicitly allowed.	
s. W	hat allows you to take all packets from a specified port, port range, or an entire VLAN and mirror the packets to a	1/1 point
sp	ecified switch port?	
() Port Mirroring	
C) Promiscuous Mode	
) DHCP Snooping	
C) Network hub	
	 Correct Port mirroring allows you to capture traffic on a switch port transparently, by sending a copy of traffic on the port to another port of your choosing. 	
0	at kind of attack does IP Source Guard (IPSG) protect against? ARP Man-in-the-middle attacks Rogue DHCP Server attacks DoS attacks	1/1 point
•	IP Spoofing attacks	
(Correct IP Source Guard protects against IP spoofing. It does this by dynamically generating ACLs for each switch port, only permitting traffic for the mapped IP address for that port.	
Wh	at can be configured to allow secure remote connections to web applications without requiring a VPN?	1/1point
0	Web browser	
•	Reverse proxy	
	RC4	
0		
	NIDS
